Worum es heute geht...

- Definitionen: Was ist mit Personalisierter Medizin gemeint?
- Beispiele: Welche Anwendungen gibt es schon?
- Intentionen: Welche Visionen stecken dahinter?
- Implikationen: Welche Bedeutung hat dies für die Pharmazie?
- Rahmenbedingungen: Welche Initiativen auf Bundesebene bestehen?

Conflict of Interest

by David Waisglass
Gordon Coulthart

"What conflict of interest?!
I work here in my spare time."

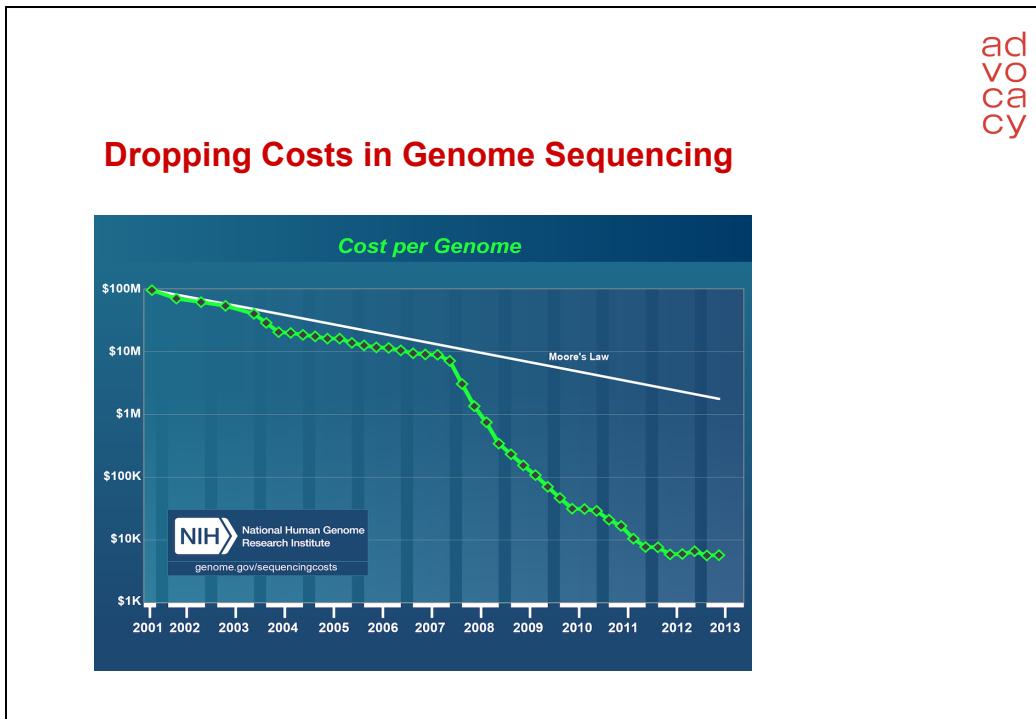

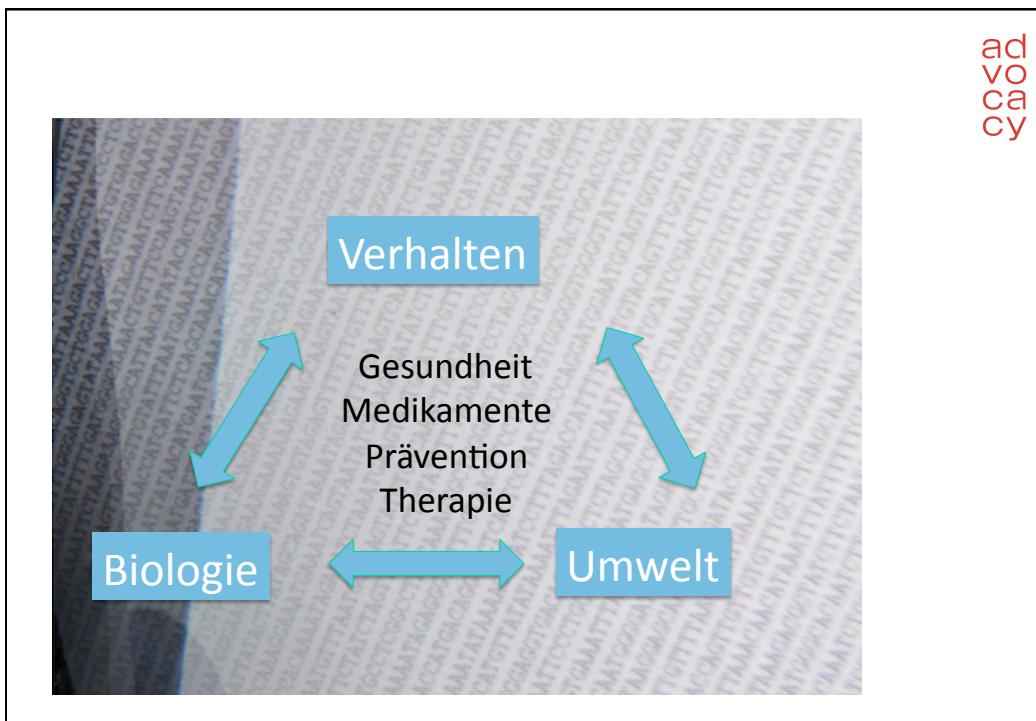

Personalisierte Medizin...

- Viele Definitionen || Unklare Begriffe
- Genomisierte Medizin
- Stratifizierte Medizin
- Präzisionsmedizin
- Individualisierte Medizin
- ESF: It describes a model where the **individual circumstances of a patient** influence notable the **medical treatment** and where the individualised biological profiles will increasingly be used to determine a person's individual healthcare needs

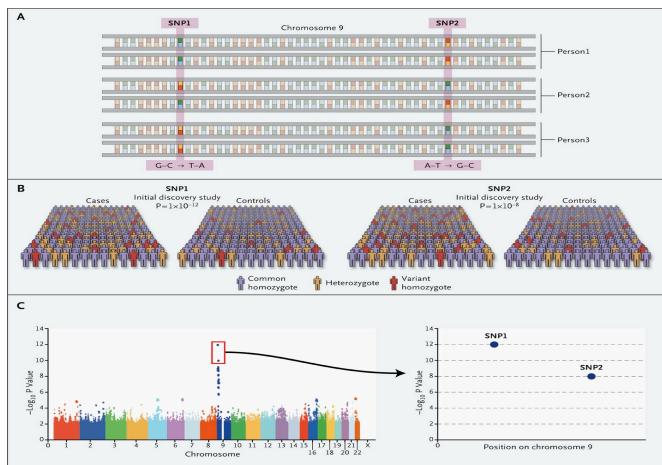

Haupttreiber der Personalisierten Medizin

- Molekularbiologie/-omics
- Informations- und Kommunikationstechnologien/Big Data

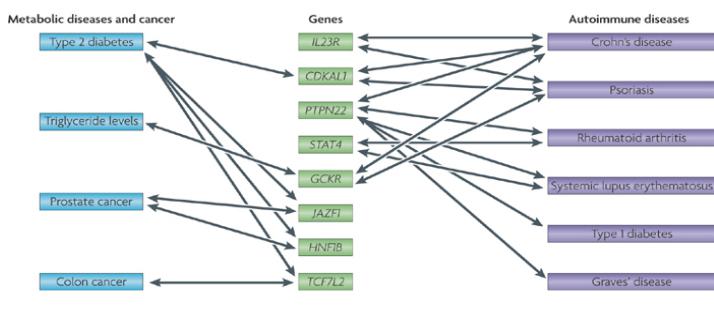

Genome-wide Association Studies (GWAS)

Manolio TA. N Engl J Med 2010;363:166-176.

New Definition of Diseases

Nature Reviews | Genetics

The recent exceptional advances in associating genes with many diseases have led some to suggest that the textbooks of medicine need to be rewritten to account for our enhanced understanding of the interconnectivity of the molecular basis underlying distinct diseases. (Frazer et al)

Genetics of Medication

– One size does NOT fit all

- Activation of thrombosis inhibitor Plavix is dependent on gene variants (CYP2C19)

- Gene variants determine sensitivity to blood thinner Warfarin

- Inflammation inhibitor Vioxx causes liver toxicity and heart failure in certain gene variants
- Genetic information for abacavir, 5-fluorouracil, Irinotecan, azathioprine, 6-Mercaptopurine (Frueh FW et al 2008).

Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease

15

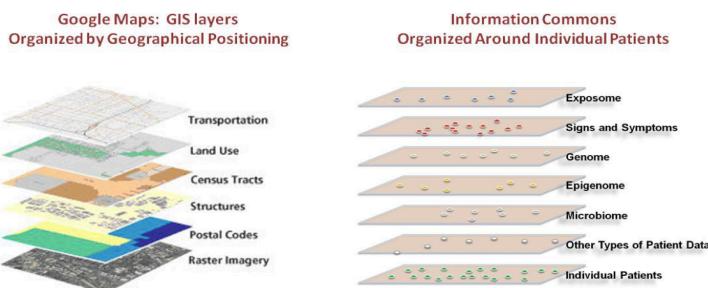

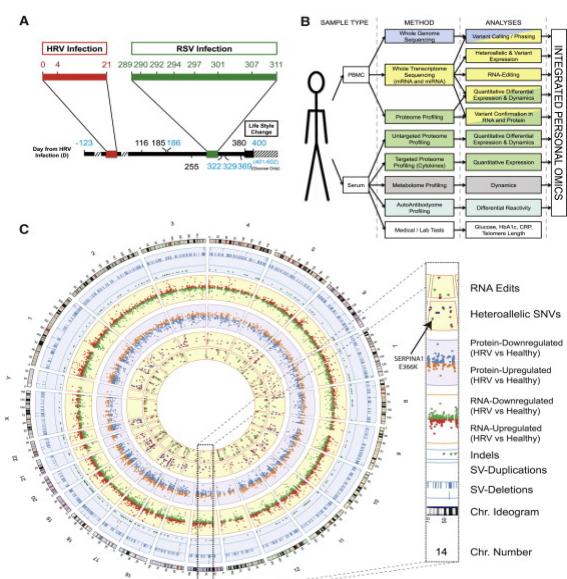

Figure 1-2: The proposed, individual-centric Information Commons (right panel) is somewhat analogous to a layered Geographical Information System (left panel). In both cases, the bottom layer defines the organization of all the overlays. However, in a GIS, any vertical line through the layers connects related snippets of information since all the layers are organized by geographical position. In contrast, data in each of the higher layers of the Information Commons will overlay on the patient layer in complex ways (e.g., patients with similar microbiomes and symptoms may have very different genome sequences). Source: FPA 2011 (left panel).

Herausforderungen der Präzisionsmedizin

- Grosse Datensätze über lange Zeit erfasst
- Grosse Population
- Neue Technologien zur Datenerfassung
- Datenverwaltung und -aufbewahrung
- Neue Algorithmen
- Neue Forschungsformen: kollaborativ, partizipativ, interdisziplinär

Gesundheitsdaten-Krise

- Data silos (Ärzte Spitäler, Apotheken, mobile Apps, Laboratorien)
- Inkompatibilitäten
- Keine Datenaggregation möglich
- Wenig Macht der Datenbesitzer
- Unnötige Kosten/Behandlungen
- Datenstandardisierunginitiativen scheitern (i.e. UK's NHS Connecting for Health)

Gentests
aus Apotheken, Drogerien und Fitnesszentren:

Der Basler Appell gegen Gentechnologie hat heute, Freitag, 8. November, bei der Staatsanwaltschaft Basel-Stadt Strafanzeige gegen die Anbieter sogenannter "direct-to-consumer" Gentests gestellt. In Schweizer Apotheken, Drogerien und Fitnessstudios werden solche Tests unter fragwürdigen Umständen angeboten.

Umfangreiche juristische Prüfungen bestärken uns in der Auffassung, dass die Angebote von Gentests, die auf dem freien Markt ohne ärztlichen Vorbehalt und ohne vorgeschriebene Beratung vertrieben werden, gegen die Strafbestimmungen mehrerer Gesetze verstossen: Gesetz über genetische Untersuchungen beim Menschen **GUWG**, das Bundesgesetz über Arzneimittel und Medizinprodukte, Heilmittelgesetz **HMG** sowie mutmasslich auch gegen das Bundesgesetz gegen den unlauteren Wettbewerb **UWG**.

Wegen vermuteten Verstosses gegen das Heilmittelgesetz haben wir gleichzeitig eine Aufsichtsanzeige an das Schweizerische Heilmittelinstitut **Swissmedic** übermittelt. Die Staatsanwaltschaft und Swissmedic müssen nun prüfen, ob durch die Abgabe von direct-to-consumer Gentests gegen Strafbestimmungen verstossen wird.

Basler Appell stellt Strafanzeige!

Rolle der Pharmazie

- Personalized medicine is the way of the future as technology improves and we learn more about our genome. **As medication experts, pharmacists have the knowledge and ability to play an important role in individualized therapy decisions. Using genetics to make therapeutic decisions will lead to more positive therapy outcomes and less adverse drug reactions.** However, there is still a lot to determine with regards to how this model will be implemented and whether or not it will be feasible.

<http://blogs.ubc.ca/phar330/2012/02/02/what-is-the-role-of-pharmacists-in-personalized-medicine/>

“Pharmacists: Personalized Medicine Experts in Primary Care”

- Personalizing patients' medications based on their genetic make-up is starting to enter the clinical arena - the technology and science are ready for integration into the daily clinical practices of primary care providers. It offers the potential for significant advances in optimizing drug therapy outcomes and minimizing adverse drug events.

Given their training and accessibility, pharmacists are ideally positioned to bring pharmacogenomics to patients. This project will equip 25 pharmacists in primary care settings (Ontario's community pharmacies and family health teams) with the required knowledge and skills to become established as personalized medicine experts in their communities.
